Google Ads API Tool Design Document

Prepared for Google Ads API **Basic Access** review

Product	LeadPages
Company website	https://leadpages.com.au
Application domain	https://app.leadpages.com.au
Primary contact	info@beanculture.com.au
Document date	17 July 2026
Document version	2.1
Declared API use	Reporting (primary) + Conversion upload (measurement)
Campaign create/manage	Not supported / not requested

Purpose. Production LeadPages Google Ads API integration for Basic Access review: scope, users, OAuth, security, reporting, conversion measurement, access controls, retention, rate limits, and delivery timeline.

Important. LeadPages reads Ads reporting and may upload offline click conversions. It does **not** create or edit campaigns, ads, keywords, bids, budgets or targeting.

1. Executive summary

LeadPages is a multi-tenant website and landing-page platform for Australian small businesses and authorised agency partners. Authenticated users connect Google Ads accounts they are authorised to access, sync performance reporting into LeadPages, and may upload first-party website conversion events (forms / call clicks) for measurement.

Secrets remain server-side. Refresh tokens are encrypted at rest (AES-256-GCM). Site permission checks apply before connect, disconnect, account selection and reporting.

1.1 Recommended Basic Access answers

Application item	Recommended answer
Access level requested	Basic Access
Tool used by	Internal staff and external customers / partners
Primary capability	Reporting via GoogleAdsService Search / SearchStream
Additional capability	Conversion measurement (offline click conversion upload)
Campaign creation	No
Campaign management	No
Keyword planning	No
Account creation	No
Expected daily volume	Well under Basic Access 15,000 operations/day initially

Permissible use. Declare conversion measurement as well as reporting. Pure Reporting-only tokens may not cover `uploadClickConversions`.

2. Product overview

Users publish websites and landing pages with visitor tracking, click-to-call and enquiry forms. The Ads integration places spend and traffic beside LeadPages first-party outcomes.

2.1 Intended users

- External LeadPages customers connecting authorised Google Ads accounts.
- Authorised agency partners managing assigned client websites.
- Internal administrators and support with role-based access.

3. Supported campaign types (reporting)

Reporting UI targets Search, Performance Max and Display. Support is read-only; LeadPages does not create or mutate campaigns.

4. Capability matrix

Capability	Status	Description
Reporting	Supported	Metrics via SearchStream
Account selection	Supported	<code>listAccessibleCustomers</code>
Conversion action setup	Supported	<code>UPLOAD_CLICKS</code> actions when enabled

Capability	Status	Description
Conversion upload	Supported	uploadClickConversions with gclid/gbraid/wbraid
Campaign creation	Not supported	—
Campaign management	Not supported	No bid/budget/creative changes
Keyword planning	Not supported	—
Account creation	Not supported	—

5. Authentication and account connection

Google OAuth 2.0 web-server flow. Connection starts from an authenticated LeadPages session. Tokens exchanged only server-side.

5.1 OAuth configuration

Application type	Web application
Audience	External
Production origin	https://app.leadpages.com.au
Redirect URI (exact)	https://app.leadpages.com.au/api/integrations/google-ads/callback
Google Ads scope	https://www.googleapis.com/auth/adwords
Identity scopes	openid, userinfo.email, userinfo.profile
Access mode	Offline (access_type=offline, prompt=consent, include_granted_scopes=true)
API version	Google Ads API v22

Figure 1 — OAuth connection sequence

5.2 Security controls

- HMAC-signed short-lived state bound to user + site + one-time nonce.
- Replay/expiry rejected before code exchange.
- Refresh tokens AES-256-GCM encrypted; never returned to browser.
- Secrets only in server env vars; disconnect revokes and deletes credentials.

6. Architecture

Figure 2 — Architecture and security boundaries

7. Data & reporting

Google Ads: account/campaign metadata, impressions, clicks, cost, CTR, CPC, destination URLs, daily grains. LeadPages first-party: visitors, sessions, call clicks, form submissions, UTMs, gclid/gbraid/wbraid. Call clicks are button clicks, not completed phone calls.

8. Conversion measurement

LeadPages may create/link UPLOAD_CLICKS conversion actions and upload form/call-click conversions. This is measurement only — not campaign management.

9. Access controls

- Connections are site-scoped.
- Customers/partners only see authorised sites.
- Ads account choice limited to OAuth user's accessible accounts.
- Queries include site identifiers for tenant separation.

10. Rate limits & errors

- Stay within Basic Access 15,000 operations/day.
- Bounded cron sync windows.
- Structured JSON errors; tokens never logged.
- Conversion upload failures do not block website UX.

11. Retention & disconnect

- Disconnect deletes encrypted refresh token and stops sync/uploads.
- User may also revoke Google access in Google Account settings.

- Privacy: <https://leadpages.com.au/privacy>

12. Delivery timeline (Gantt)

Figure 3 — Indicative timeline from 7 July 2026

13. Out of scope

- Creating Ads accounts.
- Creating/editing campaigns, ads, bids, budgets, targeting.
- Keyword planning, remarketing audiences, Customer Match.
- Automated campaign optimisation.

14. Compliance declaration

LeadPages Google Ads integration is a reporting and measurement tool for authenticated users. External users connect only accounts they are authorised to access. The product does not automatically modify campaign configuration.

Basic Access application:

- Primary: **Reporting**
- Additional: **Conversion upload**
- Users: **Internal and external**
- Campaign create/manage/keyword planning: **No**
